

Three people wrote the definition of the word "math". Based on only the definitions they wrote, rank the speakers in order of intelligence based on their definition. What can you say about each of the speakers thinking style, vision, and their definitions' narrow or wide applicability?

Person A) The process of adding, subtracting, multiplying, and dividing of numbers

Person B) Using logical operations to calculate known and unknown variables

Person C) When you do "take away", add, "times-ing", and dividing of numbers
